(54) SANITARY SHEET, AND MANUFACTURE THEREOF

(57) Abstract:

PROBLEM TO BE SOLVED: To utilize waste material, restrict bacteria, and keep cleanliness.

SOLUTION: This sanitary sheet is provided with a water permeable nonwoven fabric layer part including dried matter of residual waste liquid after extraction of more than one sort of tea and/or dried matter of leach liquor of used tea leaves containing residual waste liquid after extraction of more than one sort of tea for forming an upper surface, a water impermeable film part of plastic for forming a lower surface, a first water absorption paper layer part 5 positioned to get in contact with a lower surface of the water permeable nonwoven fabric layer part 6, a water absorption layer part 4 containing water absorption resin and water absorption

02/06/2002 4:12 PM

resin and water absorption material powder and positioned to get in contact with a lower surface of the first water absorption paper layer part 5, and a second water absorption paper layer part 3 positioned to get in contact with a lower surface of the water absorption layer part 4. This is usable for sanitary goods such as auxiliary sheets for bedding, disposable diapers, disposable diapers for animals, sanitary napkins, breast pads, sweat pads, incontinence pads, sheets for animals, etc.
